

Personal and adaptable to your listening needs.

Meet the RS 195

Do you have difficulty hearing the TV, sounds or listening to music? Over time, human hearing naturally evolves. Although this is perfectly normal, the changes can alter the quality of the sounds we experience, for example when watching TV or listening to music. The RS 195 wireless headphones take these changes into account to provide better sound that can be fully personalized to your hearing needs or difficulties. Sennheiser has refined its technology to offer simple settings that enhance speech intelligibility and reproduce the slightest details of your favorite music. The settings can be tailored to suit the listener's needs.

- Sennheiser recommends this headphone for music, TV and movie enthusiasts needing a wireless headphone solution that can accommodate for their slight hearing difficulties
- This headphone is compatible with any audio or video device that has an optical digital (toslink) or analog audio output (Left + Right RCA or 3.5mm headphone output)
- Did you know? The RS 195 is collaboration between Sennheiser and the Fraunhofer Institute for Digital Media Technology. Their expertise in how the brain processes sound combined with 70 years of audio reproduction experience produces a unique, compelling system. Using this combined savoir-faire, we were able to build an ergonomic design and unique sound settings that are perfectly adapted to the needs of individuals with slight hearing difficulties

At Sennheiser, we are on the pursuit of perfect sound. This is the aim and ambition of every single person working here. The quest for perfect sound focuses us on the dreams and needs of our customers all around the globe. Through our products and our ideas, we give them a unique sound experience or help them to create pristine sound for their audiences. We have done this for 70 years, and we are not ready to stop. Because we have a vision: to shape the future of audio, based on our history, our culture of innovation and our passion for excellence.

Features

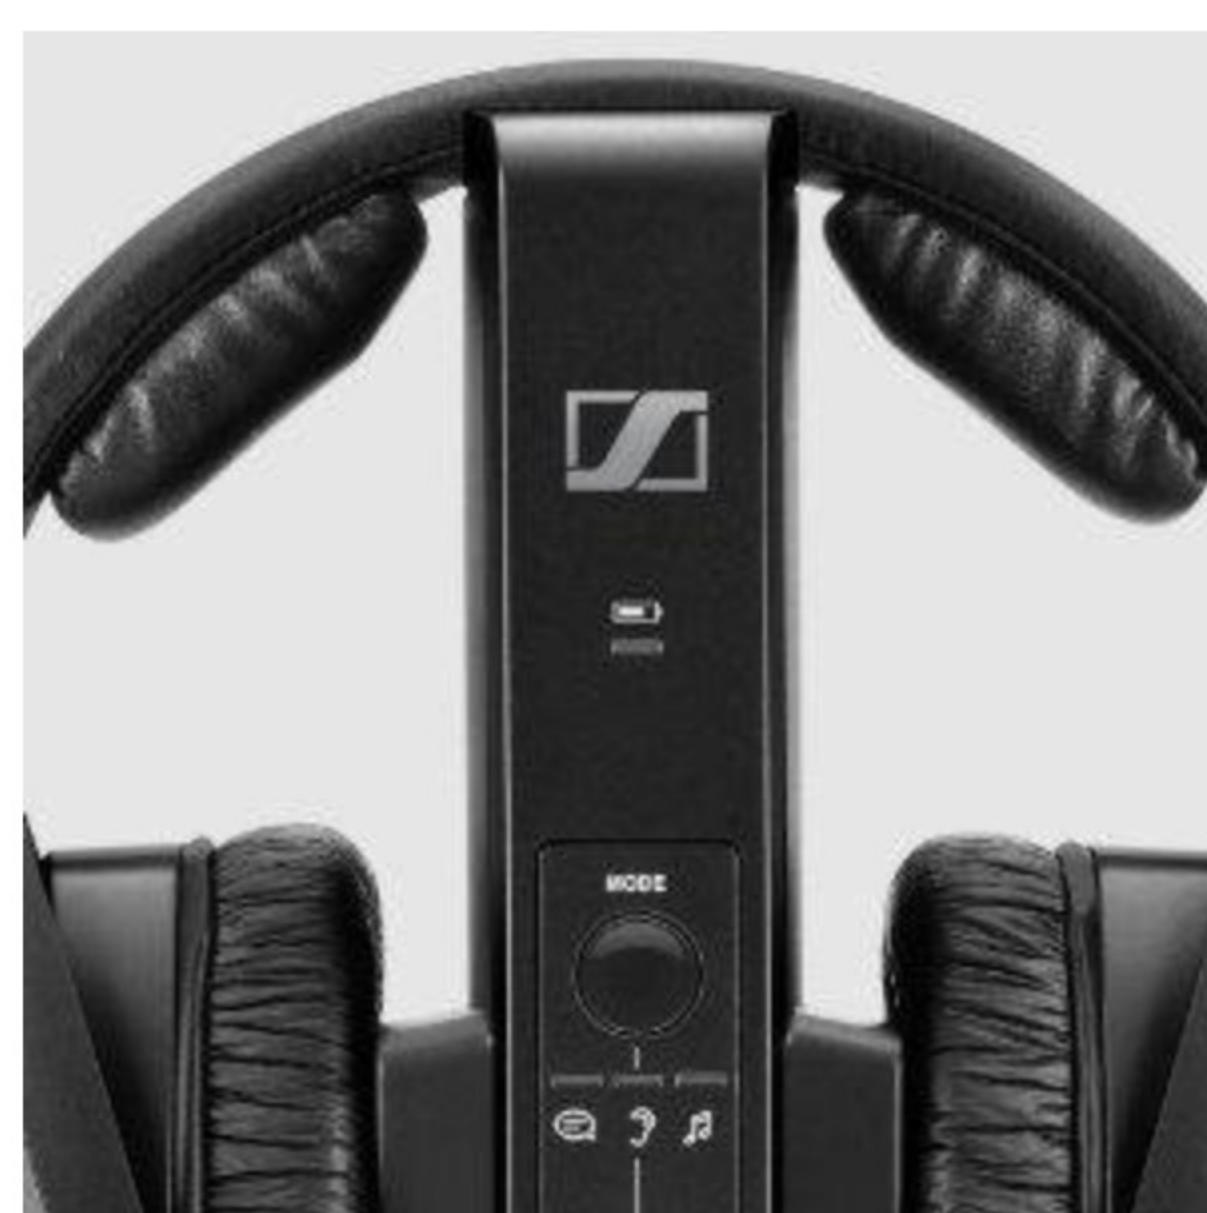

Digital Wireless Audio Transmission

Delivers exceptional sound quality over its 330 foot (line of sight) operating range. Enjoy the freedom of moving around without messy headphone wires.

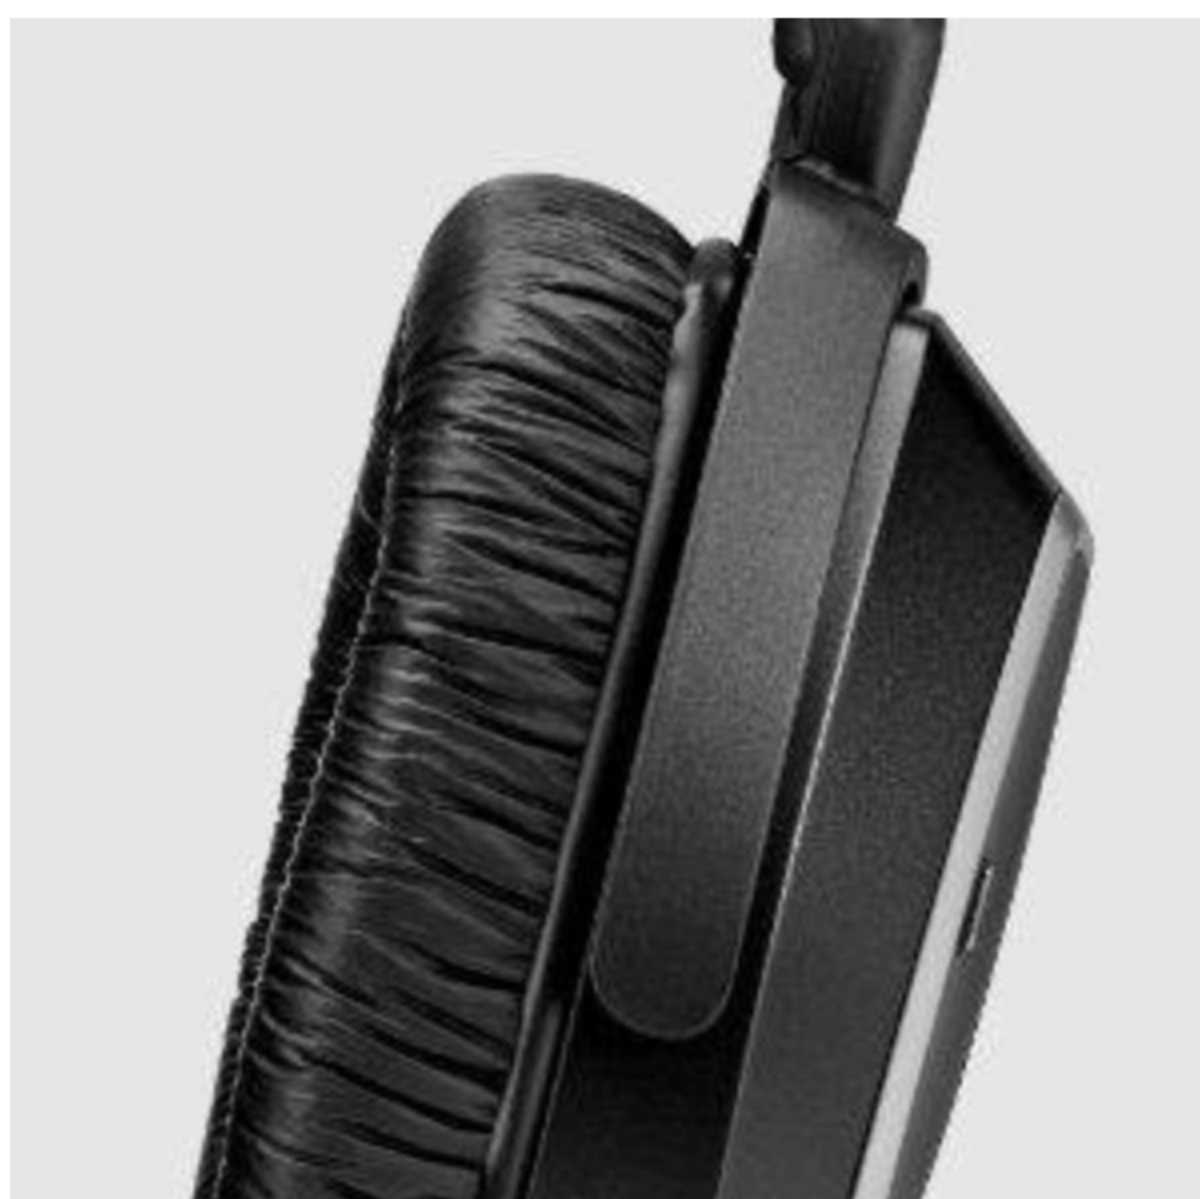

Multi-purpose Transmitter

Connects to your audio device via digital or analog input to provide sound to the headphones and acts as an 'easy charge' cradle and docking station.

Rechargeable Batteries

Provide up to 18 hours of operating time when fully charged for long listening sessions.

Closed Back, Around Ear Design

Provides exceptional wearing comfort and reduces ambient noise so you can focus on the entertainment.

Intelligently Designed Controls

For volume and balance on the headphone make the headphones extremely easy to use.

Speech and Music Listening Modes

'Speech Mode' helps eliminate background noise and enhance speech intelligibility while 'Music Mode' increases dynamic range to improve overall sound detail.
