

WiFi 6 Performance at AX5400 Speed

WiFi 6 provides greater throughput by allowing more devices to use the larger WiFi bandwidth. The AX5400 speed, coupled with MU-MIMO and OFDMA, reliably minimizes network congestion.

Powerful Triple Core 1.5Ghz Processor

All the processing power to handle the heavy demands of VR gaming, 4K streaming, and more.

Advanced Cyber Security for Gaming Networks

All-encompassing protection of your privacy, online family safety, and network security from cyber-threats is provided by WPA3 encryption, Traffic Controller firewall, and NETGEAR Armor (powered by BitDefender) anti-virus, anti-malware, and data protection technology.

Four Wired Ethernet Ports

Connect your PC, gaming consoles, and other devices at up to 1 Gbps wired speeds.

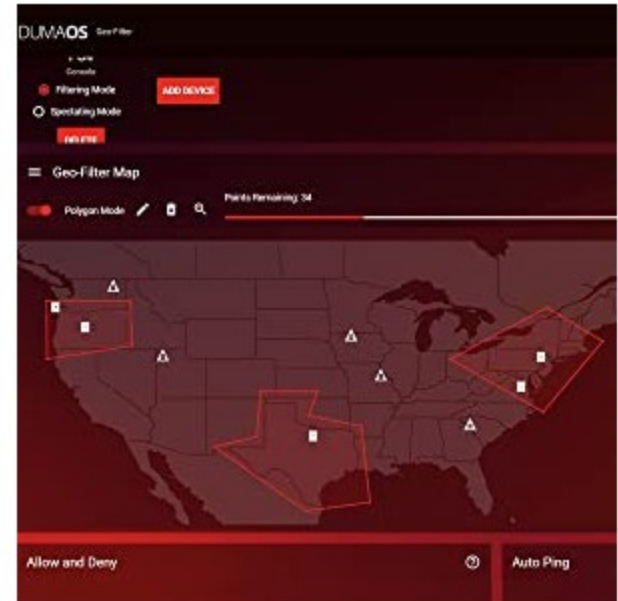

Reduced Ping Rates up to 93%

Discover and track server quality using the ping heatmap and ping history to ensure you play with only the best lag-free servers.

Prioritize Your Gaming Traffic

With Application QoS you can balance your network by allocating bandwidth to exactly the applications and devices that matter to you most. Control maximum upload and download speeds to minimize lag spikes.

Geo-fencing Captures the Best Servers

Reduce lag times by filtering and locking in the most reliable servers for the best gaming experience. Total control to whitelist your friends and block laggy opponents.
