Mesh Wi-Fi + Powerline: Signal Through Walls

Deco P9 combines dual-band Wi-Fi and powerline to establish a stronger mesh network. Powerline technology uses your home's electrical wiring to create stronger connections between Deco units, reducing the impact of walls and other obstacles on signal and providing even faster network speeds and truly seamless coverage†.

Boosted Speeds: Wi-Fi + Powerline Hybrid Bandwidth

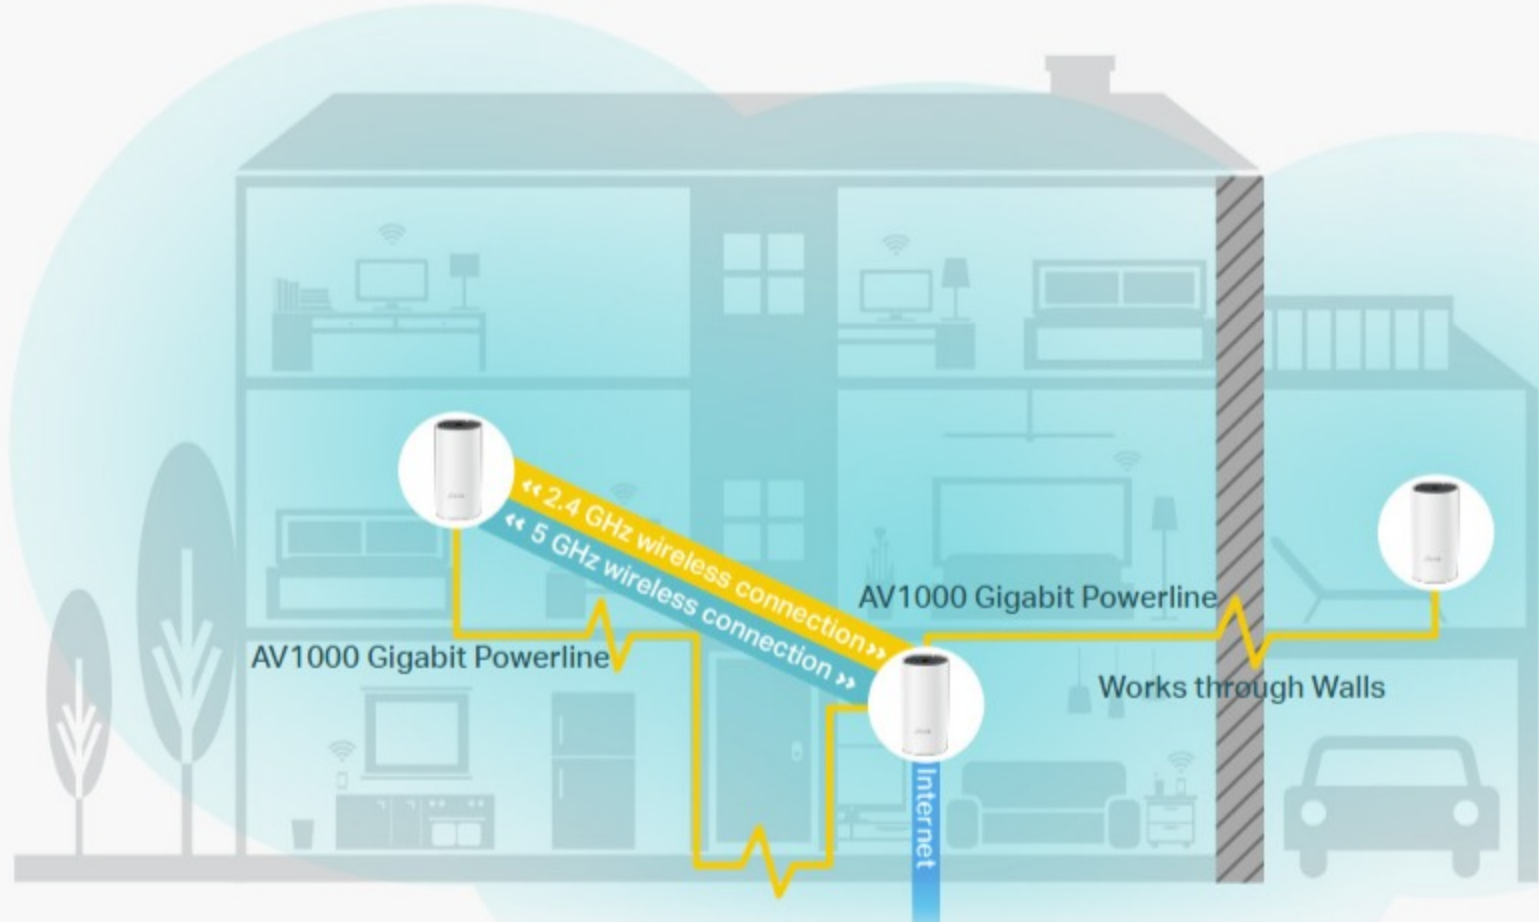

Powerline and wireless connections work together to transmit data between Deco units. The total network speed is greatly improved compared with using Wi-Fi only††.

Dead-Zone Killer

The hybrid whole-home system delivers extended coverage up to 6,000 ft² / 560 m² with the help of the combination of dual-band Wi-Fi and powerline. Eliminate weak signal areas with whole-home Wi-Fi and no more searching around for a stable connection†.

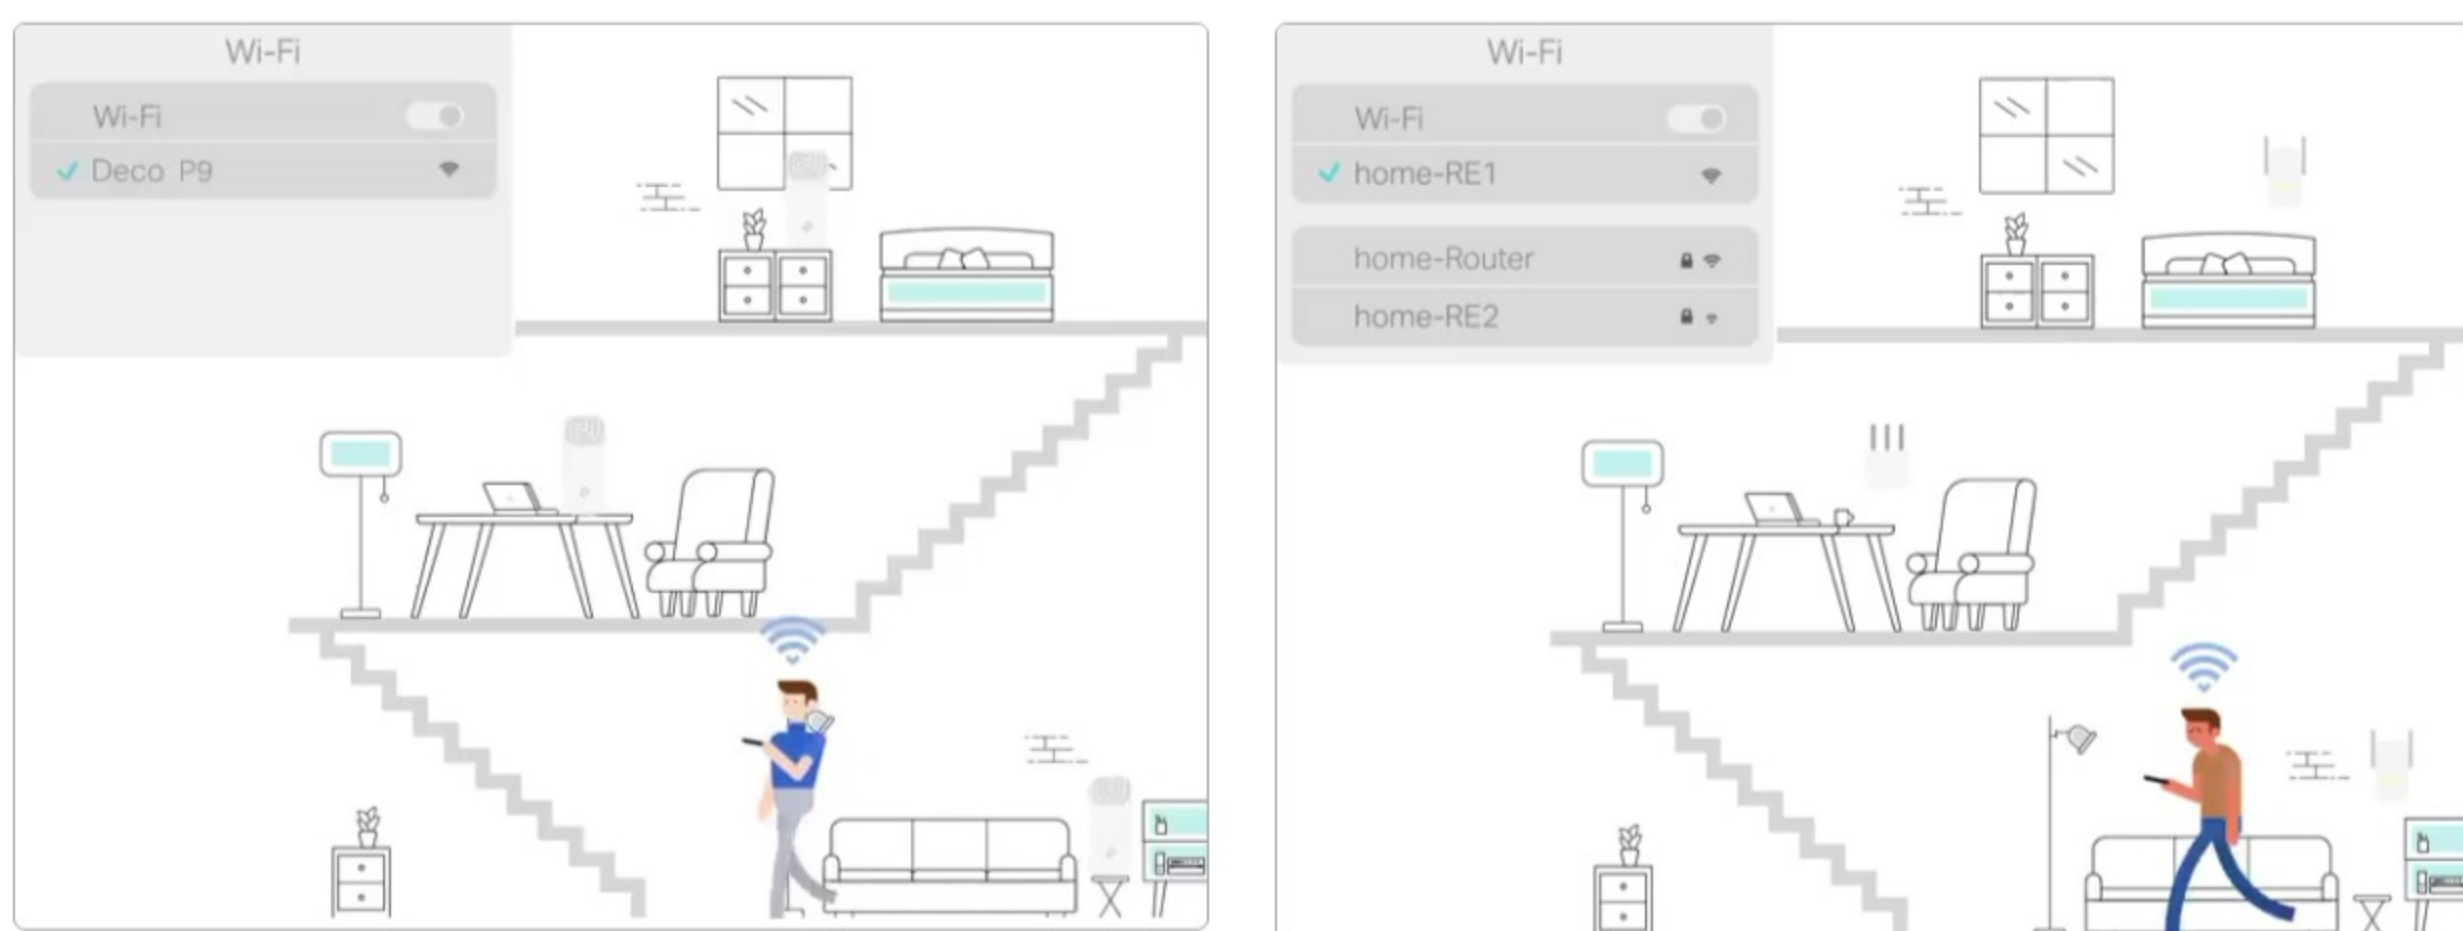

- Thick wall
- Existing electrical wiring

Seamless Roaming with One Wi-Fi Name

TP-Link Mesh means Deco units work together to form one unified network. Your phone or tablet automatically connects to the fastest Deco as you move through your home, creating a truly seamless Wi-Fi experience†.

No More Buffering

Network speeds three times faster than previous generation routers, thanks to 802.11ac wireless technology, make Deco capable of providing a lag-free connection to up to 100 devices†.

5 GHz ————— 867 Mbps
2.4 GHz ————— 300 Mbps

connections for up to
100
devices

Testing of multiple applications conducted by TP-Link in December 2018.

Robust Parental Controls

Simple, intuitive parental controls make it easy to keep your children safe while they're online.

User Profiles

Easily create a profile for each family member and set custom time limits and online time allowances.
