

Easily capture drivers behind you

The Nextbase Rear-View Camera is designed with a narrower, telephoto lens, to record the view of the road directly behind your vehicle. The view recorded is similar to the image seen in your rear-view mirror. It uses a 30° telephoto lens to look back through the vehicle, capturing details of the road behind, making sure you are guarded against tailgaters and rear end impacts. The Rear-View Camera can easily be installed by clicking it into the side of your front facing Nextbase Dash Cam model.

Resolution

When you are using a rear-view camera module the resolution of your front camera will automatically adjust to manage the two high resolution video files. The options for these settings are:

622GW Front 4K, Rear 1080p

422/522GW Front 1080p, Rear 1080p OR Front 1440p, Rear 720p

322GW Front 1080p, Rear 720p

Module connectivity

Connects directly to your Dash Cam and records the rear view of your journey through your car.

Compatible with

Nextbase 322GW, 422GW, 522GW and 622GW models.

Your independent witness in the car. Prove an accident was not your fault.
