Exceptional color accuracy

Color professionals rely on color-accurate projectors to ensure that their creations look exactly as intended. With that in mind, ProArt Projector A1 is factory pre-calibrated and Calman Verified to ensure industry-leading performance. With $\Delta E < 2$ color accuracy, you can rest assured that images will appear with true color. This makes ProArt Projector A1 perfect for creator studios, art galleries or museums.

Wide color gamut

ProArt Projector A1 covers 98% sRGB and Rec. 709 color spaces for rich, vivid projections with lifelike detail.

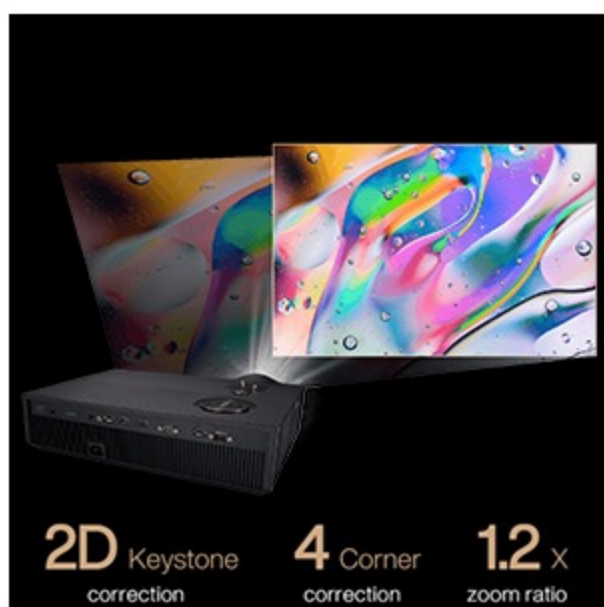

Bright FHD visuals

The 3000-lumen LED light source enables ProArt Projector A1 to deliver bright and crisp FHD (1920 x 1080) imagery. The mercury-free RGB LED light source ensures gorgeous, fade-free projections for up to 30,000 hours – which amounts to about 20 years of real-world use or an average of 4 hours per day.

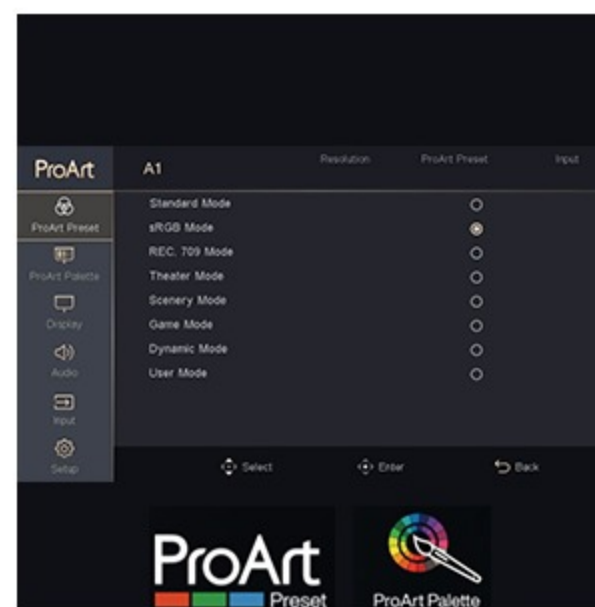

Wireless mirroring

With the bundled USB WIFI dongle and wireless mirroring feature, ProArt Projector A1 enables effortless content streaming from iOS, Android or Windows 10 devices.

Versatile controls

ProArt Projector A1 offers four-corner and 2D keystone correction, plus a 1.2X zoom ratio for projecting images in a confined space. 2D keystone correction allows you to adjust the projected image to get a proper rectangular projection, and four-corner adjustment compensates to prevent image distortion when the projector is positioned off-center in relation to the projection surface.

Easy color management

ASUS ProArt Preset options enable quick switching between color modes so it's easy to review different content types. Alternately, ASUS ProArt Palette offers an intuitive interface where users can customize a wide range of color parameters, including hue, temperature and gamma levels. Both features can be accessed via remote control or the hotkeys on the projector.
