

Motion and Light Controls

Kasa Smart Wi-Fi Dimmer Switch, Motion-Activated

KS220M

Motion-Triggered Lights

Your connected lights guide you through the dark by turning on automatically when you enter and turning off when you leave. All thanks to the equipped sensitive PIR sensor and professional fresnel lens for wide range and high accuracy.

Smart Energy Saving

If you enter a room during the day, the built-in ambient light sensor prevents the lights from automatically switching on. To save more energy, set your lights to dim to appropriate brightness levels.

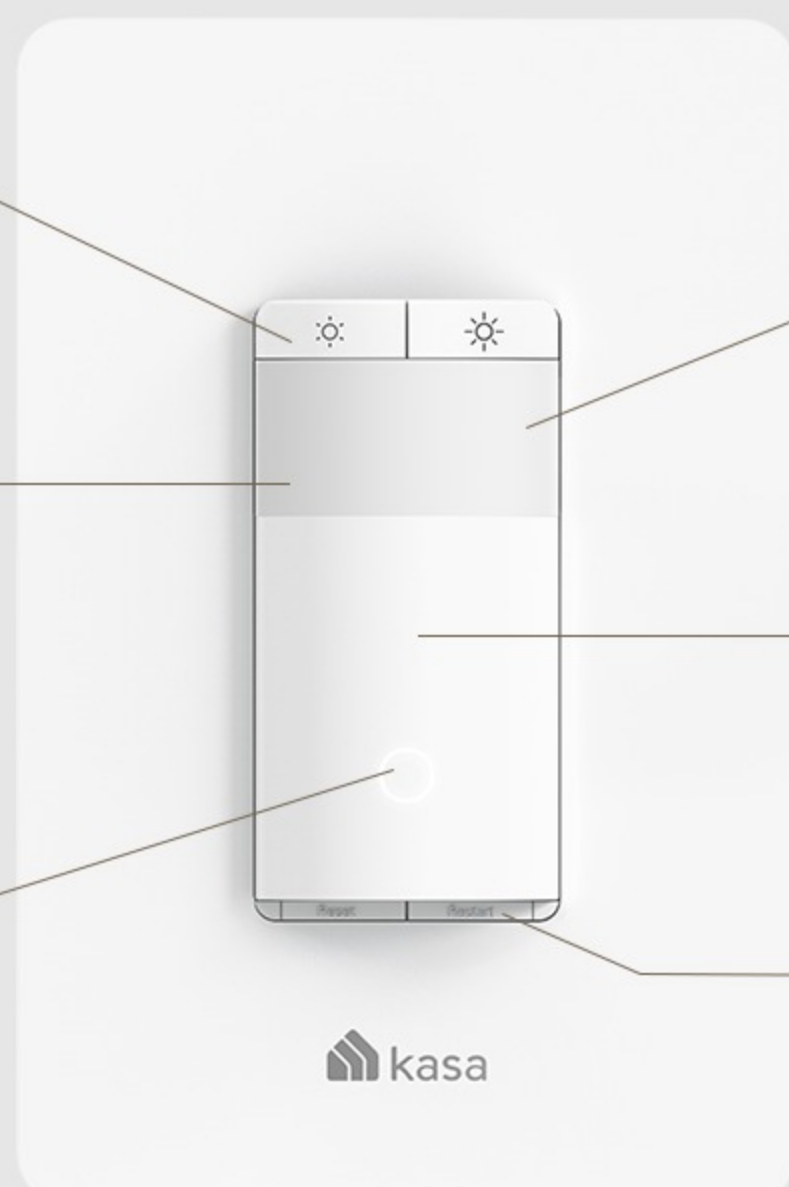

Intuitive and Simple Design

Besides the Kasa app, your family can also physically interact with the smart dimmer for manual control.

Dimming Up & Down Buttons
for fine-tune lighting

Professional Fresnel Lens
with a wide angle and long-distance detection

LED Indicator
lights up to help you locate it in the dark

Built-In Motion Sensor and Ambient Light Sensor

On/Off Button
restore light to its last status or turn it off with one tap.

Restart & Reset Buttons
are separate from the switch button to prevent accidental touch.
