Synthetic Rubber  
Material

Easy Charging up to 5  
hours

3 Riding Modes : Turbo,  
Cruise and Safe Mode

Ambient lights under  
footboard

ONE RIDE. THREE DIFFERENT MODES

## 3 riding modes for every teen's level

### Safe mode, slow and steady

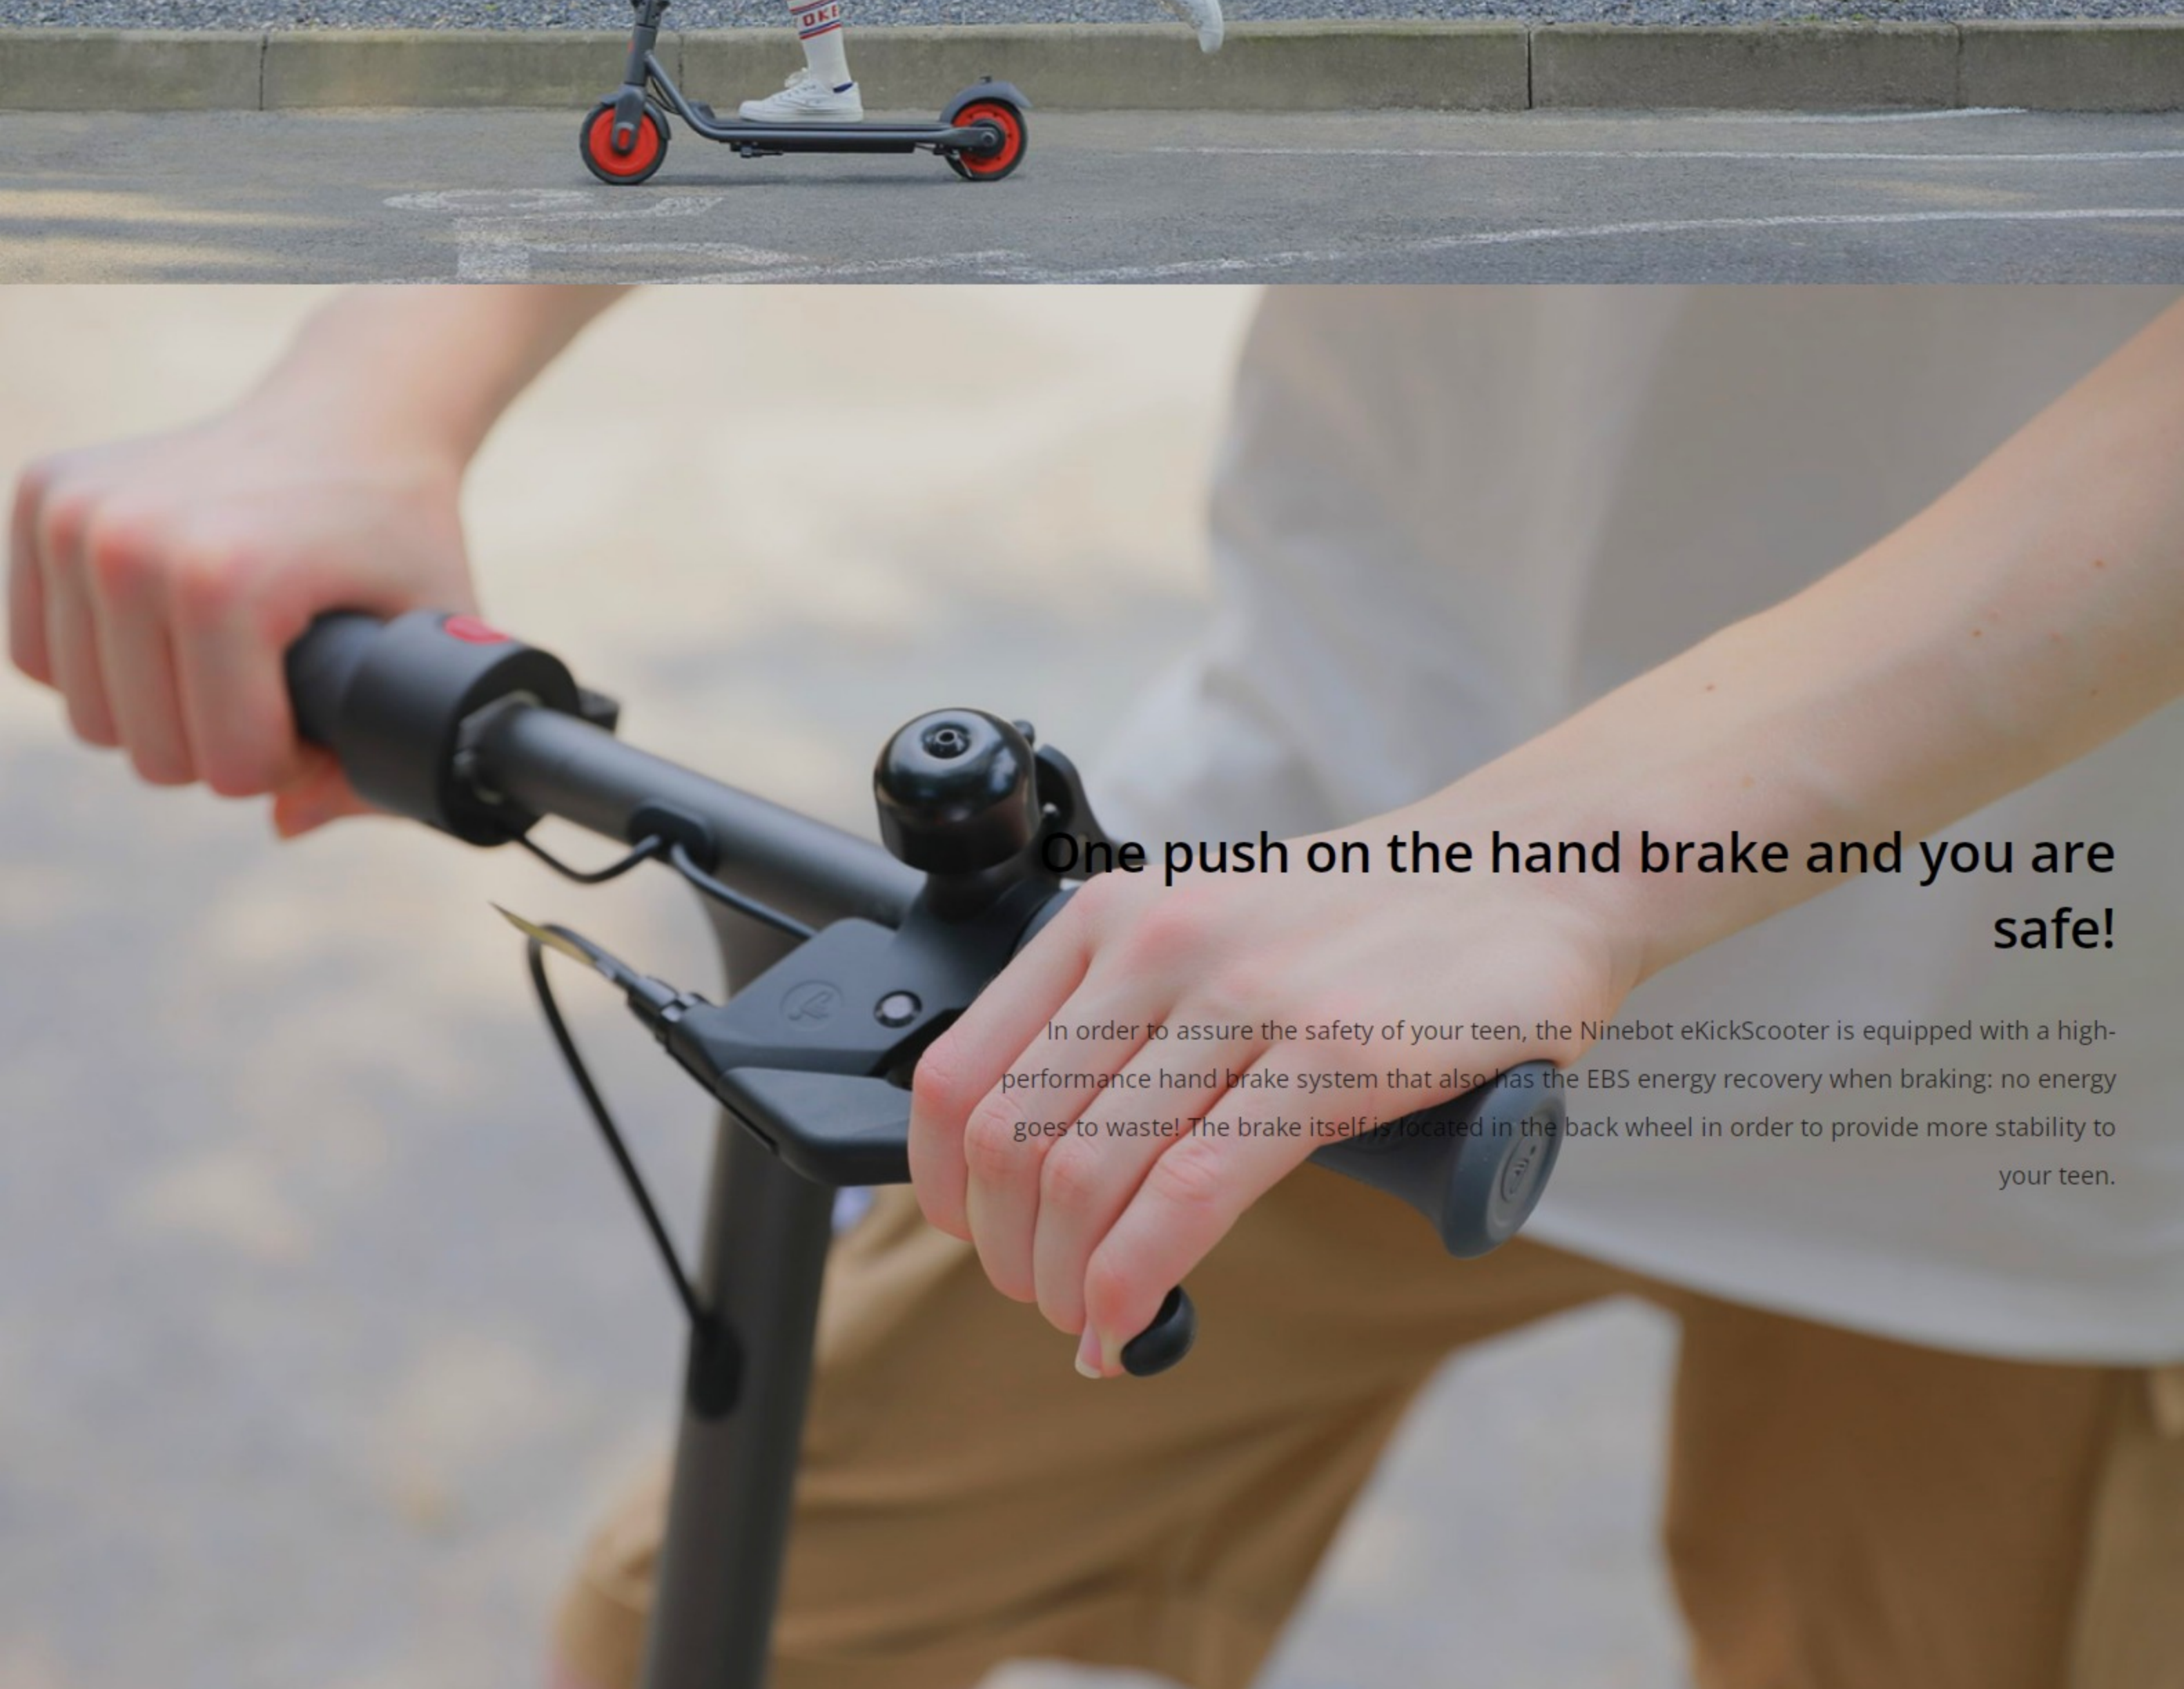

The safe mode has a maximum speed of up to 10km/h (6.2mph), making it perfect for beginners. They can accelerate by pressing the throttle integrated into the power button (the indicator light blinks fast and you will hear 3 beeps).

### Cruise mode, kick and go

This mode has a maximum speed of up to 16km/h (10mph), all you need to get going is one kick and you can just cruise along the rest of the ride (the indicator light blinks slowly and you will hear 2 beeps).

### Turbo mode, let the adventure begin

For the more adventurous, sporty teens, the turbo mode is the way to show off to your friends. The maximum turbo speed for the ZING C20 is up to 16km/h (10mph), your eKickScooter will be the biggest hit amongst your friends (the indicator light is solid and you will hear 4 beeps).

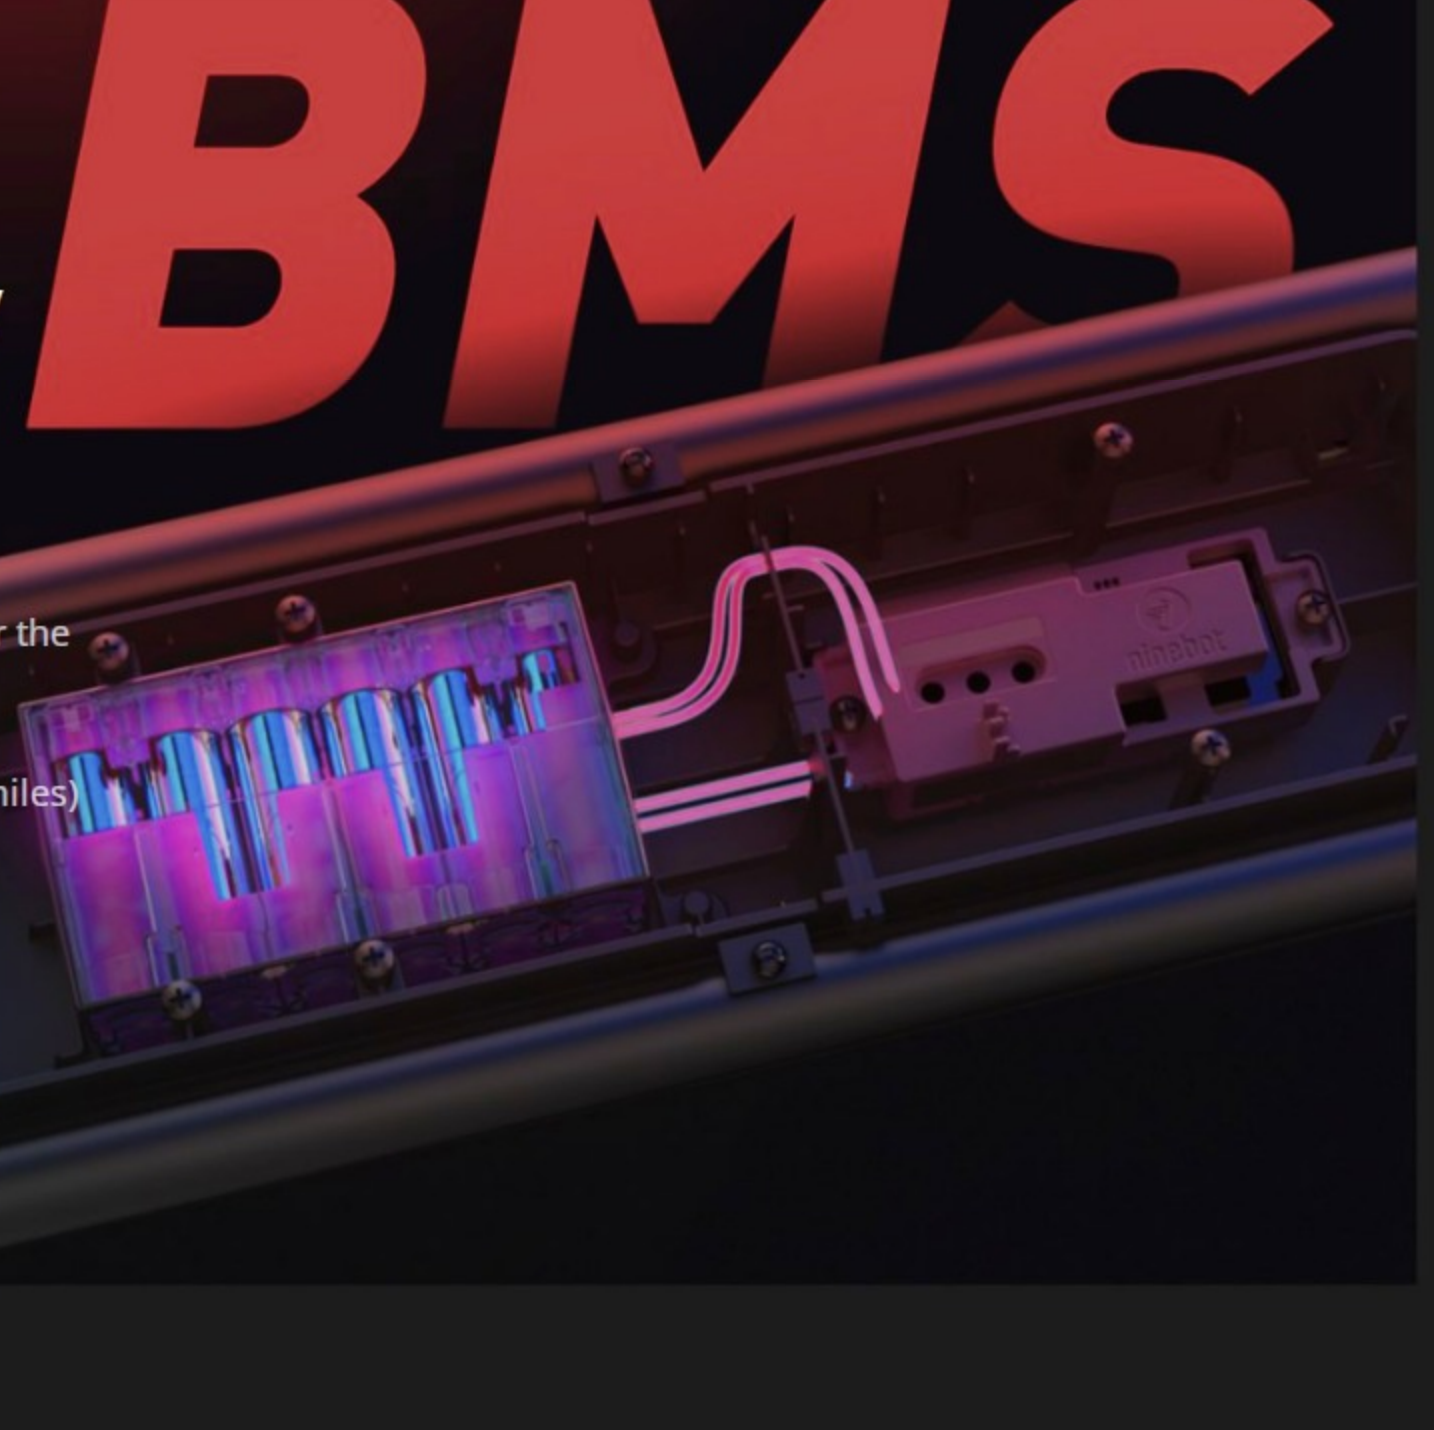

## One push on the hand brake and you are safe!

In order to assure the safety of your teen, the Ninebot eKickScooter is equipped with a high-performance hand brake system that also has the EBS energy recovery when braking: no energy goes to waste! The brake itself is located in the back wheel in order to provide more stability to your teen.

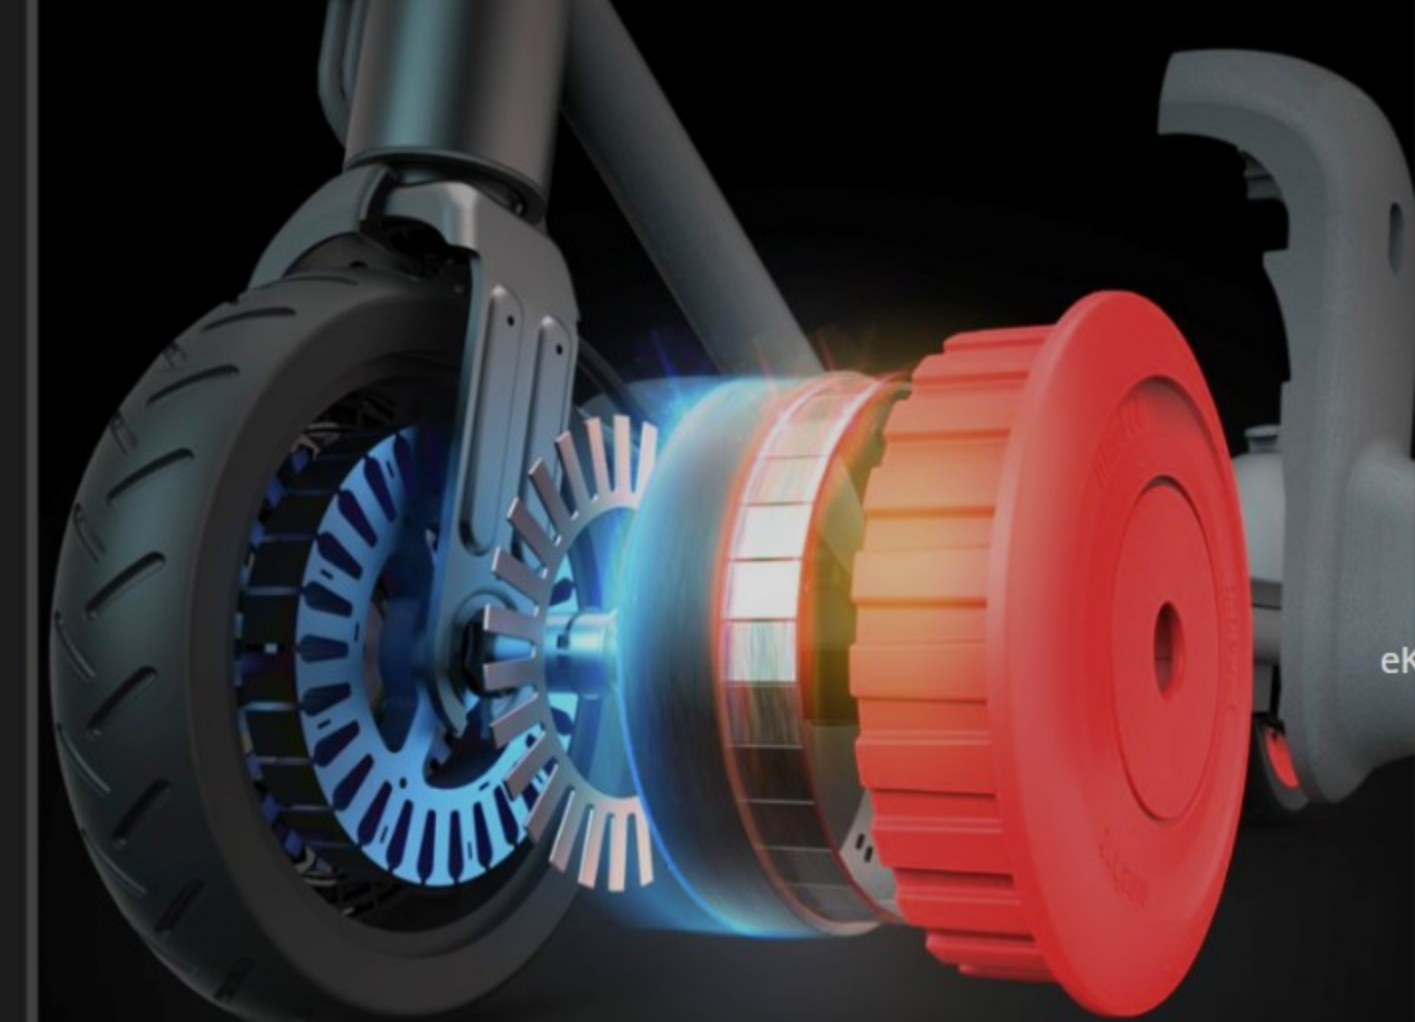

## High-performance and Compact Battery Design

The battery pack integrates the lithium-ion battery, controller, and smart BMS (Battery Management System) into one compact module which is situated in the footboard to lower the centre of gravity: this gives more stability for your teen's ride.

With a single charge of approx. 5 hours, the ZING eKickScooter can last up to 20 km (12.4 miles) which means a lot of fun that can be had with friends!

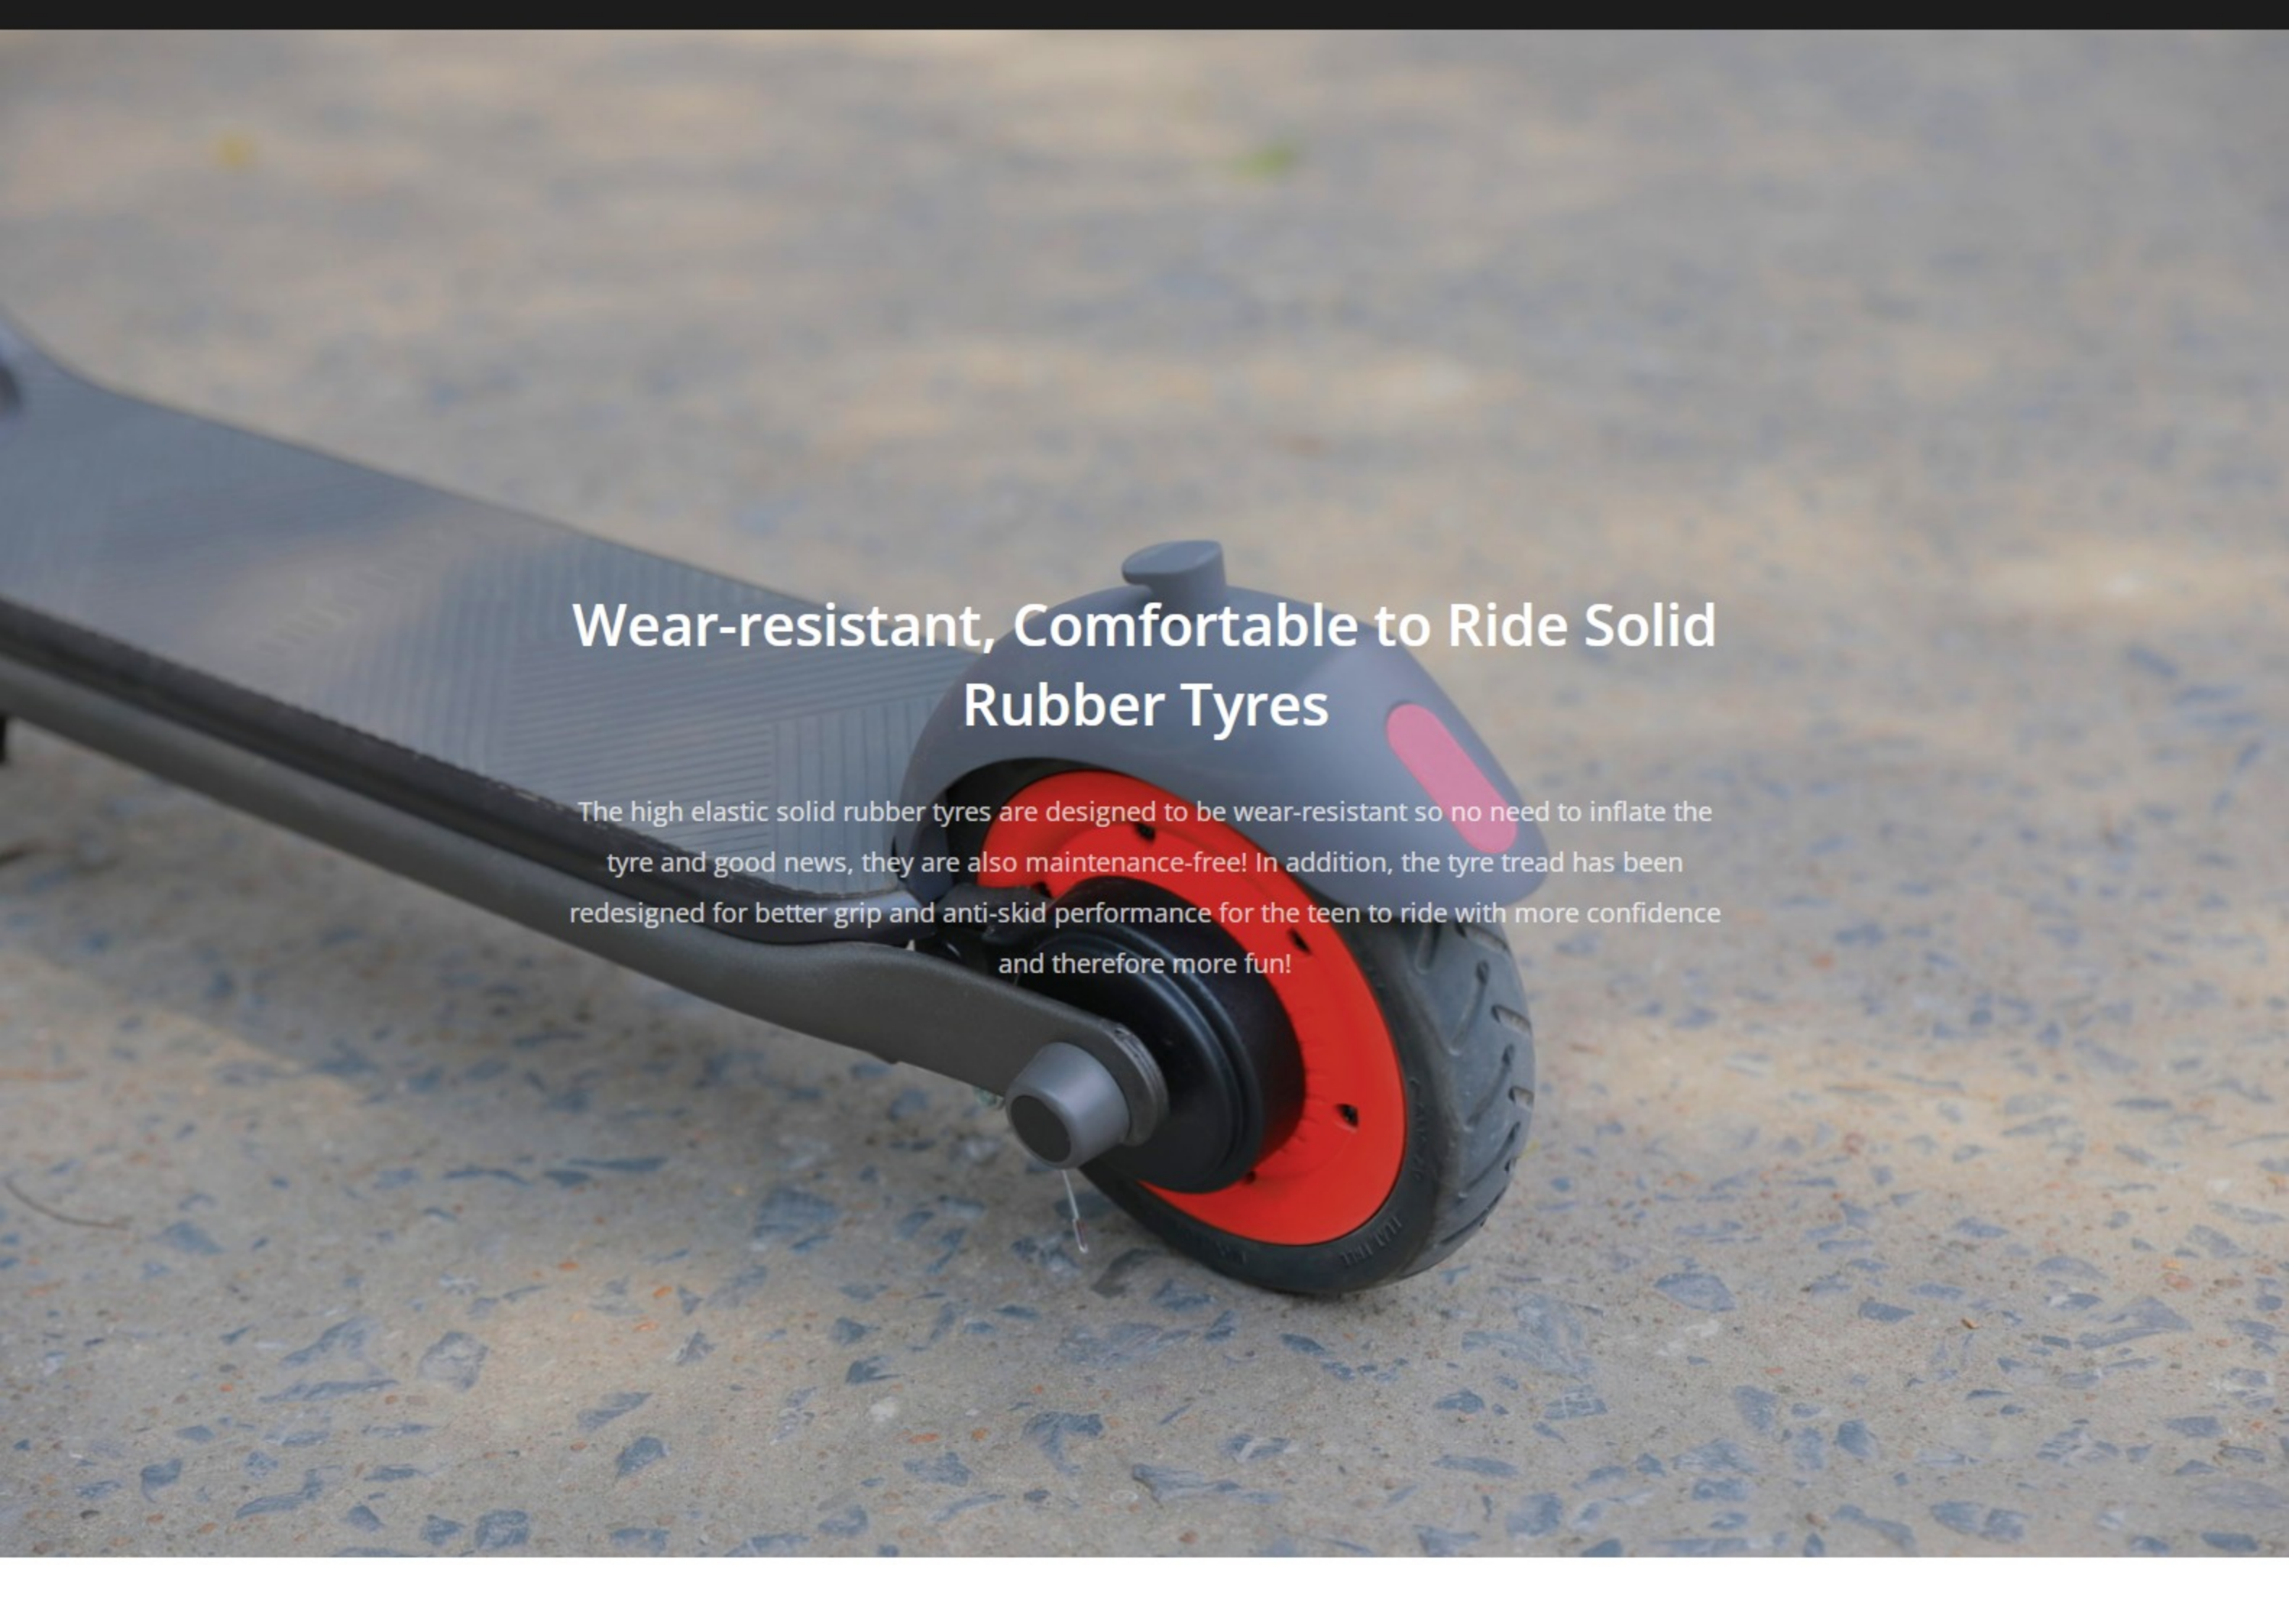

# BMS

## One press on the thumb throttle and the fun begins!

The thumb throttle has moderate resistance and responsiveness depending on the riding mode. Thanks to the 150W rated power of the motor and a simple press on the throttle, the eKickScooter can go up to 10km/h with the Safe mode and up to 16km/h maximum speed (with Turbo and Cruise modes).

## Wear-resistant, Comfortable to Ride Solid Rubber Tyres

The high elastic solid rubber tyres are designed to be wear-resistant so no need to inflate the tyre and good news, they are also maintenance-free! In addition, the tyre tread has been redesigned for better grip and anti-skid performance for the teen to ride with more confidence and therefore more fun!

## Tough double tube frame made for adventurous teen

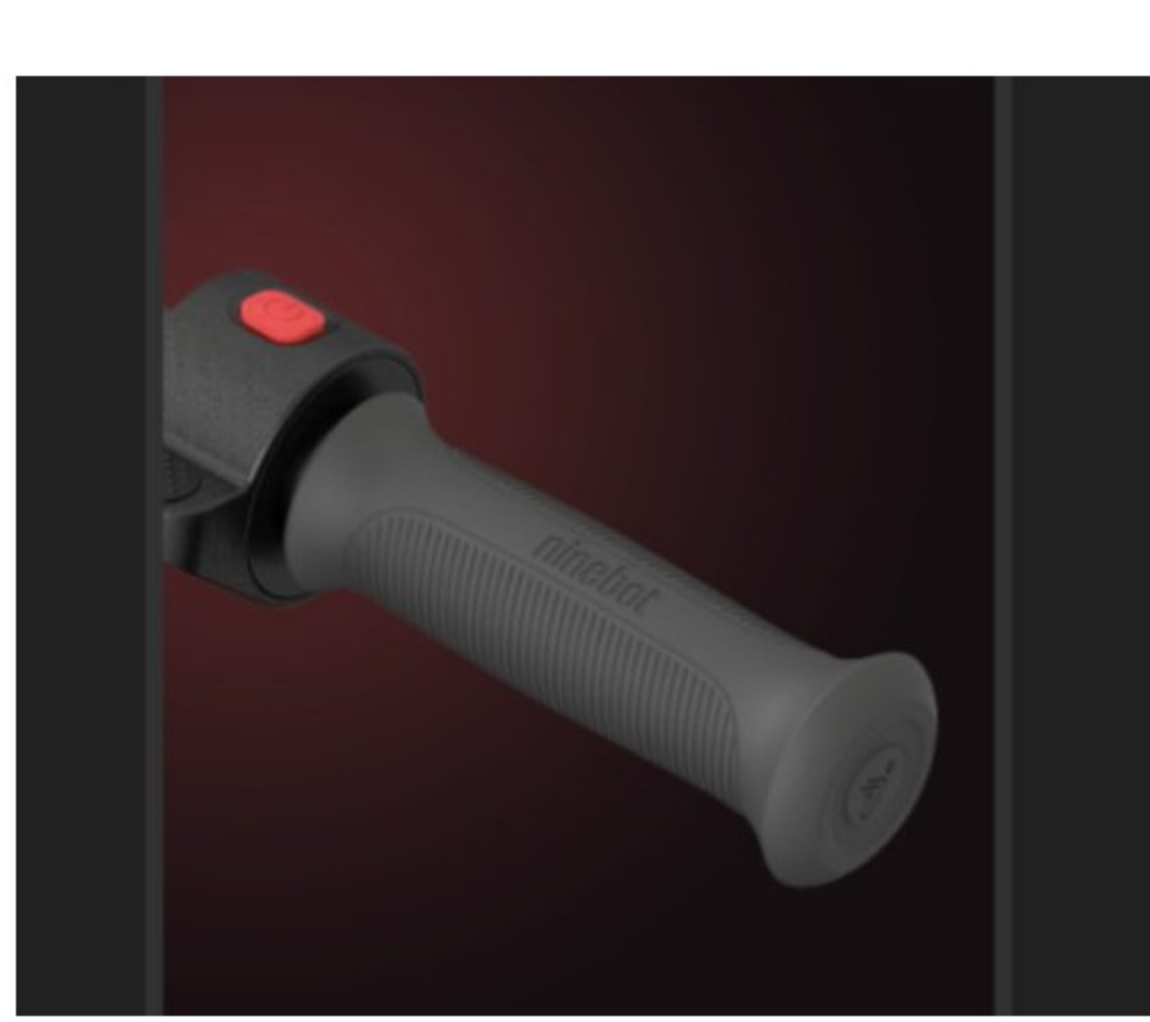

The frame is made of high toughness steel, with a triangle structure, which brings high durability and resistance to the product. The teen will have good stability on the footboard and will ride with confidence.

The footboard is also made with anti-slip material to provide your teen with a steadfast riding experience.

In addition, this eKickScooter is IPX4 rated which means it is resistant to water splashes.

## Thermo Plastic Rubber (TPR) Comfortable Handle Grips

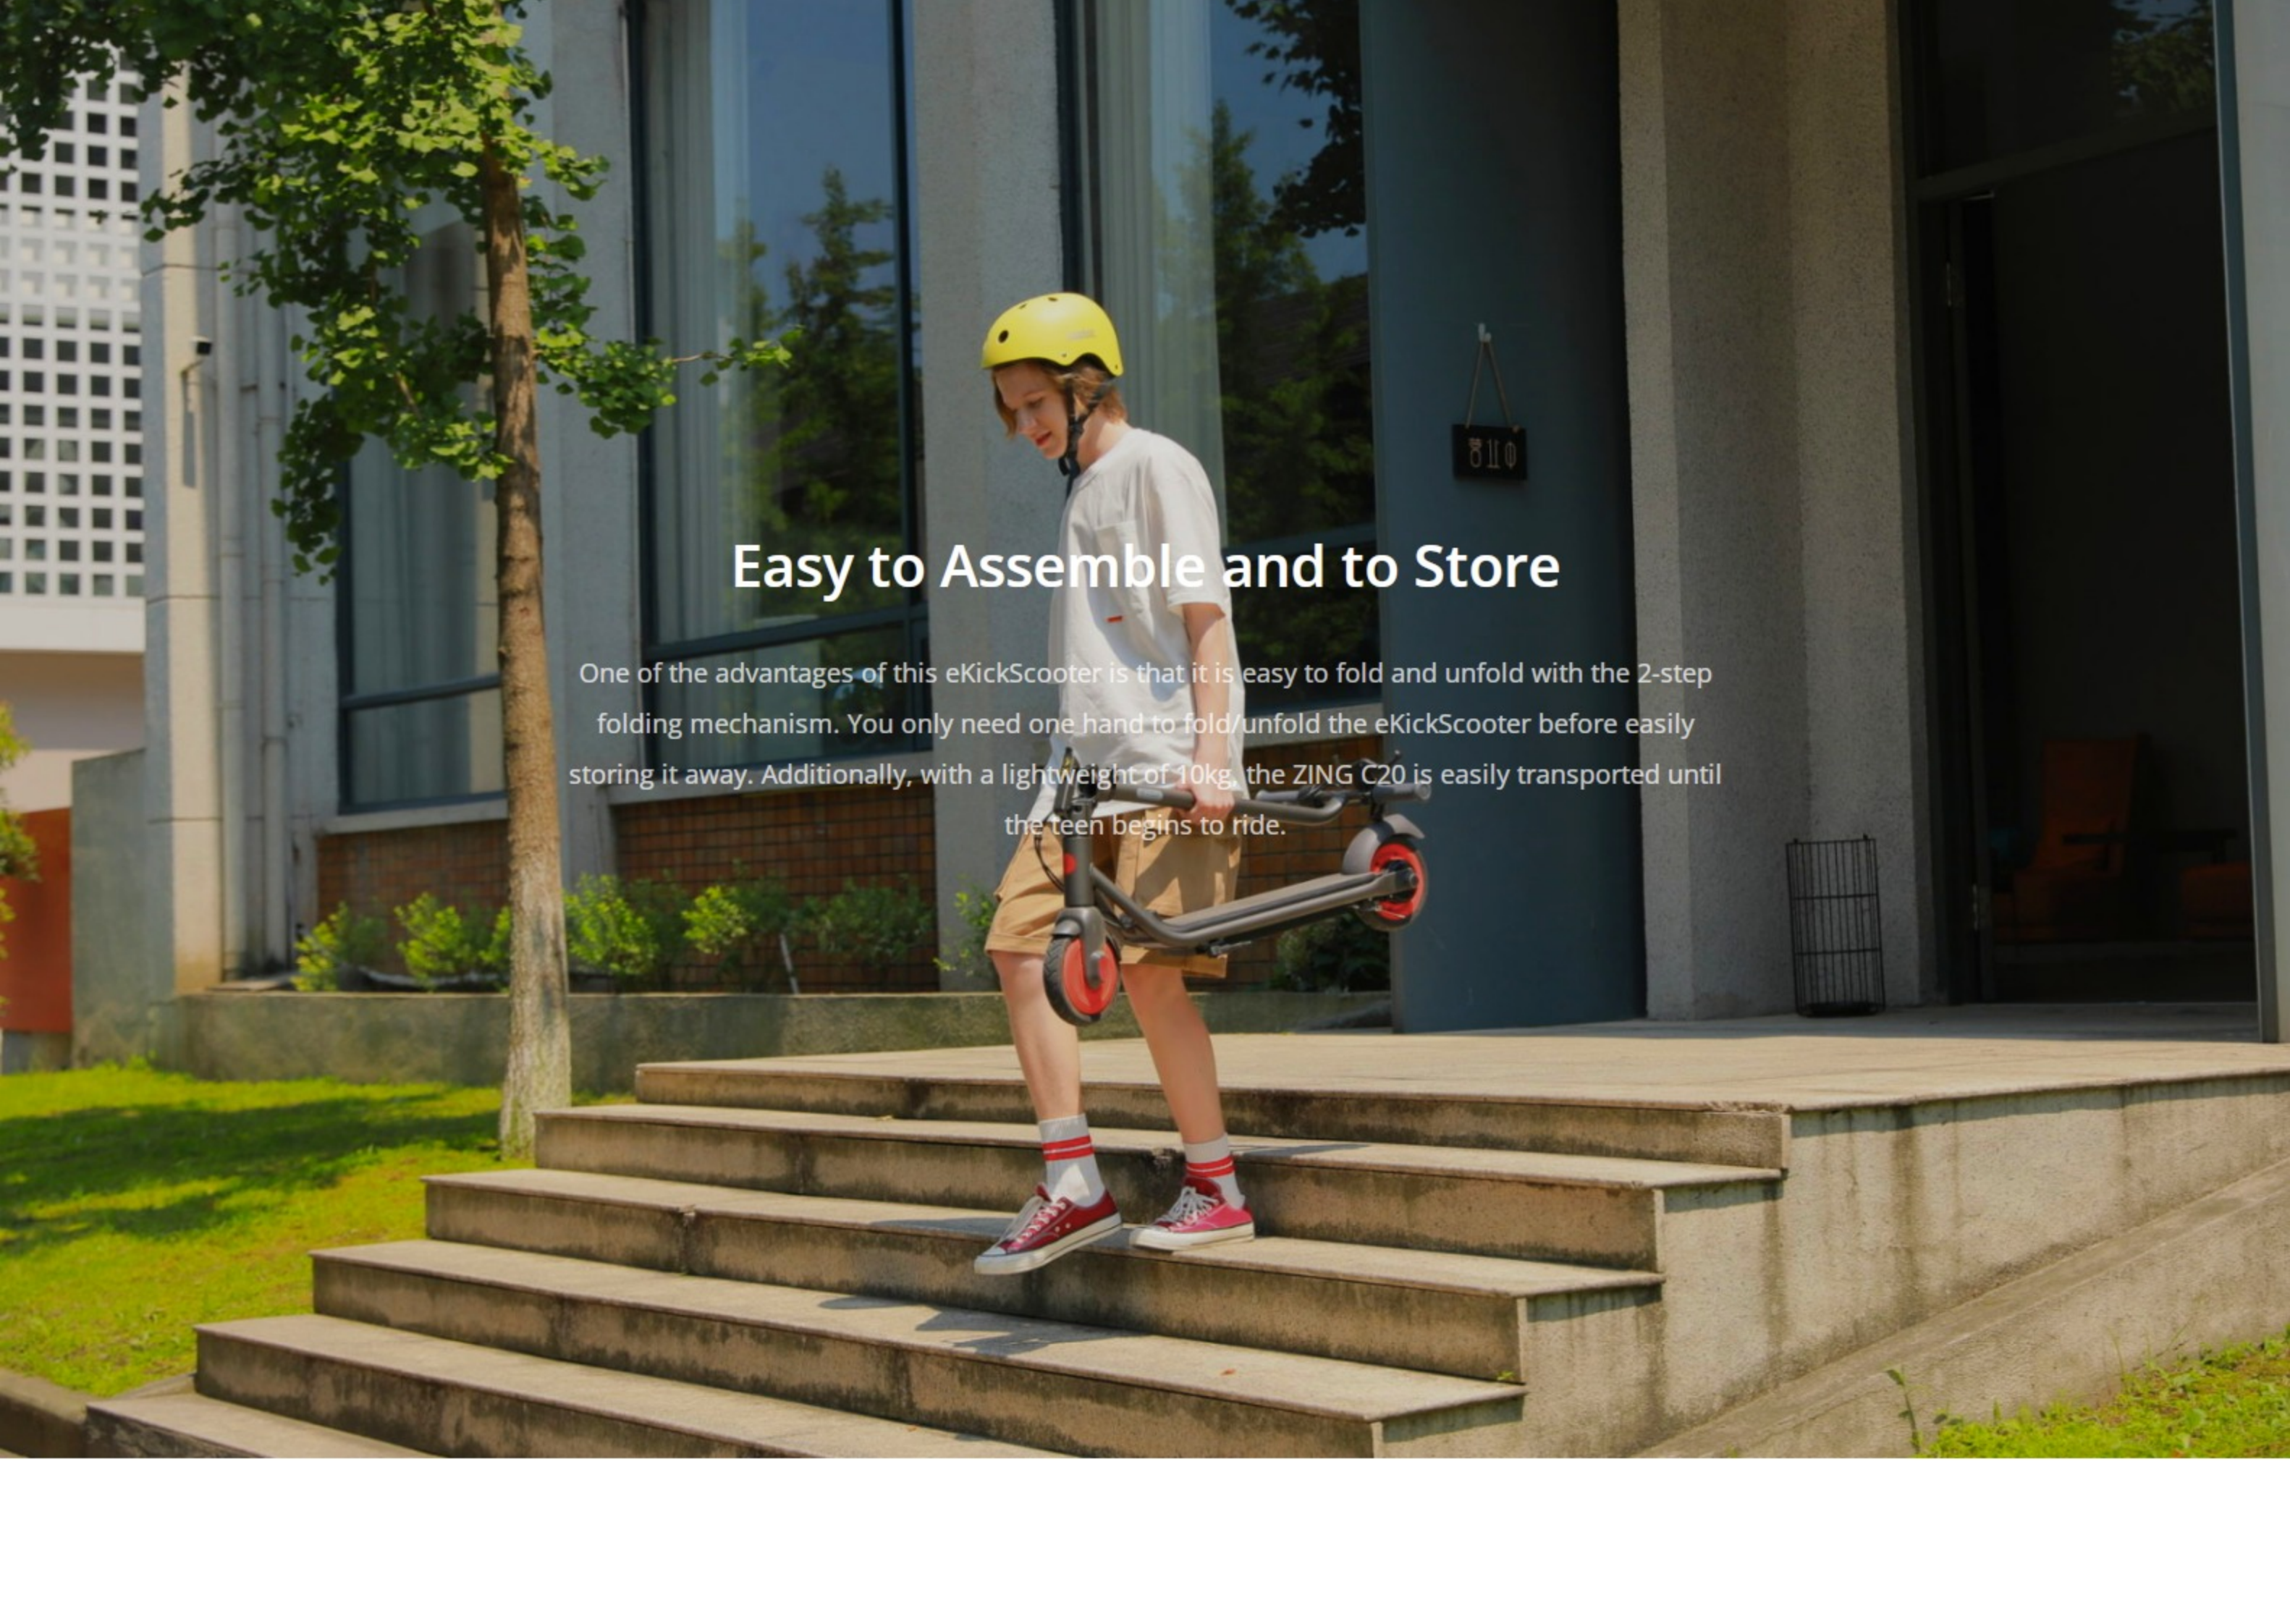

The handle grips are made of TPR (Thermo Plastic Rubber) material, which is comfortable to hold and offers superior anti-skid traction. Additionally, TPR handle grips are also easy to clean and maintain.

## Try out the ambient lights with the ZING C20!

This is the feature that any teen would like the most. With each riding mode, a different ambient light will be lit under their footboard:

- In Safe mode, the lights turn red and are pulsing;
- In Cruise mode, the lights pulse in a blue colour;
- But in Turbo mode, the lights are pulsating in many colours!

## Easy to Assemble and to Store

One of the advantages of this eKickScooter is that it is easy to fold and unfold with the 2-step folding mechanism. You only need one hand to fold/unfold the eKickScooter before easily storing it away. Additionally, with a lightweight of 10kg, the ZING C20 is easily transported until the teen begins to ride.
