Listen for yourself.

Hear what passes as voice quality for our competitor vs. what Ooma Pure Voice HD Technology sounds like.

COMPETITOR AUDIO

OOMA AUDIO

Here's how the magic happens:

Free Canada Calling

Free calling has never been easier. With any Ooma Telo purchase, you'll get free residential VoIP to anyone in Canada. All you pay are applicable taxes and fees.

Advanced Voice Compression

Ooma uses an advanced voice compression algorithm that reduces bandwidth by 60% over standard home phone service technologies. This leaves you with more bandwidth for all your other online activities.

Encrypted Calls

Ooma takes your privacy seriously. We use the same encryption technology governments use to protect classified data (which makes Ooma Canada more secure than your old landline and a great free landline alternative).

HD Voice

Ooma HD Voice technology doubles the fidelity of your phone calls by capturing twice the speech information of a standard voice call (yes, that includes your landline). When you and the other caller use an Ooma handset, or any HD-compatible phone, your voice will sound more natural.

Wire-Speed QoS

Although Ooma uses a mere fraction of the bandwidth of standard VoIP technology, the bandwidth it does use must be an absolute priority. Ooma prioritizes voice packets without slowing down the rest of your network so you can enjoy crystal-clear calls even while uploading video clips.

Adaptive Redundancy

Packet loss causes phone calls to sound stuttered or garbled with standard VoIP technology. Our sophisticated algorithms detect packet loss on your internet connection before you even hear it and automatically deploy redundant packets to boost phone call clarity.

Take your residential phone on-the-go.

With Ooma, you can use your residential VoIP phone from anywhere. Enjoy free outbound calling, see who has called, and access your voicemail all through the Ooma app.

[LEARN MORE](#)

Sophisticated technology that fits into your home.

- Ooma Telo isn't another clunky adapter, it's a small, secure Linux computer packed with processing power to keep your calls clear and reliable.
- Ooma is a full router capable of prioritizing voice data and directing traffic to ensure the most reliable internet phone service.
- A USB port supports Wi-Fi and Bluetooth accessories, and provides future expansion opportunities.
- A built-in speaker provides the ability to screen calls to answering.
- A keypad provides one-touch access to voicemail.
- DECT radio supports up to 4 wireless handsets and over 4,000 sensors.
- A built-in 900MHz dual-core processor provides the power for Ooma Pure Voice, including HD Voice and adaptive redundancy. This technology results in a more natural sounding voice without stuttering or interruption.
- The device also includes 1 GB NAND Flash with dual-system image for the ultimate in reliability and upgradability to new services.
